Figure 1: A line graph showing the number of cases of COVID-19 in the United States from March 2020 to March 2021. The x-axis represents time in months, with labels for March, April, May, June, July, August, September, October, November, December, January, February, and March. The y-axis represents the number of cases, with labels from 0 to 100 in increments of 1. The graph shows a sharp increase in cases starting in March 2020, peaking in April 2020 at approximately 100 cases, followed by a decline and then a second, even higher peak in May 2020 at approximately 100 cases. The number of cases then fluctuates between 10 and 20 for the remainder of the period shown.
